Product Description

High Glossy PVC Lamination Roll Film For Kitchen Cabinet Decoration

Product Description:

Our pvc foil is primarily made from Polyvinyl Chloride (PVC), a synthetic plastic material known for its durability, flexibility, and ease of processing.

Available in a wide range of colors, patterns, and textures, our pvc foil can mimic the look of natural materials such as wood, stone, fabric, or metal, providing a cost-effective alternative to these materials while still retaining a premium aesthetic.

The foil can be applied to a variety of surfaces, from interior doors to cabinets to walls and beyond. This adhesive product is designed to be used in different areas of the interior, and it holds well to different substrates.

Realsun Deco PVC foil is particularly renowned for its resilience to wear and tear, making it a popular choice for high-traffic areas. With minimal upkeep required, it can simply be wiped down with a wet cloth once a week.

The cost-effectiveness of pvc foil in comparison to natural materials is one of its primary benefits, making it possible to create upmarket designs without the expense.

Manufacturers offer a broad range of styles and finishes, allowing original modifications to meet project requirements and personal design preferences.

Decorative pvc foil is widely used in both private and commercial settings for kitchen and bathroom cabinetry, wall paneling, interior doors, furniture surfaces, retail displays, and more.

Technical Parameters:

Our products are available in a range of options when it come to their thickness, width, length, and design. The thickness range is from 0.1mm to 0.5mm, and widths have a choice of 1260mm or 1400mm. The length of the roll is from 100 meters to 400 meters. The designs include wood grain, solid colors, marble, brick, and many more. This is all supplemented with a range of surface treatments such as matt, super matt, embossed, high gloss, and soft touch. We provide OEM (Original Equipment Manufacturer) and ODM (Original Design Manufacturer) services as well.

Applications:

Different Process for different application:

Membrane Press (vacuum press):

This process is used to cover on MDF, particleboard, wooden board, fiberboard, etc., for doors, kitchen cabinet, wardrobe, furniture, etc. It also covers embossed board and cover five surfaces at the same time. The thickness is 0.20-0.50mm and the width is 1260mm, 1400mm. The length of the roll is 100-300m.

Wrapping Profiles:

It is used to cover on all kinds of profiles including wood profile, aluminum profile, PVC profile, etc. for door frame, window sill, base channel, PVC ceiling and so on. The thickness of this process is 0.12-0.18mm and the width of it is 40-1260mm. The length of the roll is 300-800m.

Cold Laminating:

This process covers on all kinds of flat panels, such as wood panel, steel panel, aluminum panel, PVC panel, etc. for doors and furniture. The thickness is 0.12-0.20mm and the width is 1240-1260mm. The length of the roll is 300-500m.

Hot Laminating:

It is used to cover on the PVC panel, steel panel, aluminum panel for doors, skirting and so on. The thickness of this process is 0.16-0.30mm, the width is 1260mm and the length of the roll is 200-300m.

Self-adhesive:

This process can be put on any smooth surface for furniture and indoor decorations. It has the thickness of 0.10-0.20mm, the width of 600mm/1220mm and the length of 5-50m/roll.

Customization:
